

How to start a Reach Out and Read (ROR) + Library Partnership

Step 1:

Check with your librarians, early learning staff, and Youth Services/Community Managers to see if relationships already exist. Talk internally to see what type/level of partnership might make sense.

Step 2:

Find out if a ROR clinic exists near you!

Washington

<https://reachoutandreadwa.org/> - 206.524.3579 - washington@reachoutandread.org

Oregon:

<http://reachoutandread.org/oregon/> - 503-830-0510 - samira.godil@reachoutandread.org

Find a program near you:

<http://www.reachoutandread.org/resource-center/find-a-program/>

For large scale partnerships, identify the best person at your library to reach out to the ROR director for your state. For local, clinic-to-branch level connections, ROR staff can help with making an initial introduction. In some cases, there may be value in setting up an in-person meeting with ROR, the clinic, and the library. In others, an email introduction may be ideal.

Step 3:

Get to know your clinic! Set up a phone or in-person meeting. Here are some questions you might ask:

- I am interested in knowing more about the communities you serve at your clinic. Do you serve low income families or families from specific cultural groups?
- What languages are spoken as a first language by your clients?
- What community resources do you frequently refer families to?
- Do you have any questions for me about what resources are available at the library?

WLA/OLA 2019 – Charting the Unknown Together
Healthcare Providers & Libraries Collaborating to Support Families

- Are there any services or support you wish the library could help provide?
- Do you know of any barriers your clients have in reaching library services?
- We have fliers advertising _____, would any of these be valuable for you to have at your location?
- Can you think of any opportunities for the library to connect with families here at the clinic?
- Do you host any health fairs or community events (public or private) where I could promote library resources to your clients?
- Do you think staff at your location would benefit from hearing more about library services? (if yes, offer to attend a staff meeting)
- Besides medical staff like nurses and doctors, does the clinic have social workers or other staff dedicated to assisting clients with wrap around/additional services? Would you be willing to connect me to that person? Is there anyone else at the clinic that you think I should talk to?

Step 4:

Follow up with whatever deliverables you have promised – dropping off fliers, arranging to attend a staff meeting, etc.

Step 5:

Check in periodically. Ask if the clinic would like updated fliers or tell them about a new service.

Your connection may be simply about library resource sharing, but remember – it is a huge benefit for a busy clinic to be up-to-date with library offerings. It reminds them to talk about the library with families, and it keeps accurate information available to families.

By remaining in touch, when opportunities come up, you will come to mind when the clinic thinks of a new program or service. You will also know more about the unique needs of the clinic and will be poised to share with them when you hear about new opportunities.

Step 6:

Share your success with others at your library and beyond! Encourage other libraries to reach out to ROR clinics, and ROR clinics outside your service area to connect to their local library.

Examples of Reach Out and Read (ROR) + Library Partnerships

Large scale partnerships:

In Multnomah County OR, the Multnomah County Health Department, Reach Out and Read, and the Multnomah County Library created a joint MOU. Together they provide early literacy assistance to families in the following ways:

- Library purchases and delivers books to ROR clinics and provides training for clinic staff.
- Health Department reports data to ROR and is responsible for implementation of the program model.
- Library delivers materials for waiting rooms to all clinics in the library services area – materials from Friends of the Library donations, and Library discards.
- Library provides centralized, coordinated support for activities listed below in the Clinic-to-Branch section.

Other types of larger scale partnerships:

- Library teams up with clinic to ask for grant to supply clinic with books.
- Coordinated delivery of Summer Reading materials to all clinics in the service area.
- Library and clinic connect to co-promote early learning needs to key stakeholders, or co-sponsor initiatives to encourage families to read together.
- Library visits to the clinics with the book mobile.

Clinic-to-Branch Connections:

- Provide clinic with materials about library resources, services, and programs. This may also include early literacy posters/materials, maps to local libraries, and resources for parents and teens.
- Offer library card sign ups, staff a resource table, or deliver story time in the waiting room or during clinic events/health fairs.
- Create recommended booklists for children in the ROR age range.
- Visit staff/nurse meetings to educate staff about library resources for referral purposes.
- Make connections to social workers and outreach staff at the clinic.
- Share early literacy posters/materials.
- Create a library-related display within the clinic.
- Provide trainings for clinic staff meetings, parent groups, or childbirth classes about library resources and early learning.
- Coordinate the delivery of library discards, gently used books, and/or Friends of the Library donations to provide books for clinic waiting rooms.
- Attend the clinic's private or public health fairs, holiday parties, and events for their clients to promote library resources and sign people up with library cards.
- Co-develop programs with clinic staff for specific family/parent groups.

Tips for Successful Partnerships:

- Let the clinic's needs and capacity guide the work rather than coming with a predetermined program plan. For small scale partnerships, be patient and let the relationship evolve. Different clinics have different capacity, turnover of staff, volume of clients, and/or size of space.
- Don't forget about adults – parents and teens may need job/career resources, continuing education support, citizenship info, computer help, and/or book recommendations.
- People will travel long distances to visit a doctor they trust. Be open to cross-promoting library resources across library locations or even library systems.
- Don't forget to check in about language needs and offer any translated resources you have available.
- Don't underestimate the benefit of keeping up-to-date library resources available to clinics. This keeps the library fresh in the mind of clinic staff and families.
- One of the biggest needs of clinics to participate in ROR is funding the books. Don't be discouraged if this is a clinic's main need and your library can't offer books or money. Help them in other ways by talking about their program with other community partners and funders, and continue to supply them with up-to-date library resources.
- Make sure your library knows about the great work you are doing with ROR and your local clinic!

REACH OUT AND READ OREGON

where great stories begin™

Mission Statement

Reach Out and Read™ gives young children a foundation for success by incorporating books into pediatric care and encouraging families to read aloud together.

Our unique model:

- Reach Out and Read-trained doctors and nurses perform routine health checkups from infancy through five years not only with a stethoscope, but also with a children's book.
- The book is used as a clinical tool to encourage parents to read aloud, to give them a simple, practical way of spending time and engaging in conversation with their young children.
- The child is given a new book to take home and read with the family.

Seizing the opportunity:

- Parent-child interactions during the early years support healthy brain development that forms the foundation for success later at school and in life.
- As the only national early literacy nonprofit that works with families through pediatric care, we have an opportunity to reach millions of young children in the early years – when it counts.

THE ANNUAL IMPACT IN OREGON

 **75,000** children served

 **112,500** parents and caregivers engaged

 **1,197** volunteer medical providers & additional medical volunteers

 **150,000** well-child visits served

 **121** program sites

 **133,000** books distributed

Extensive peer-reviewed research shows that in families served by Reach Out and Read:

For full details of our research, please visit www.reachoutandread.org/why-we-work/researchfindings

The Reach Out and Read model is endorsed by the American Academy of Pediatrics

In 2014, the **American Academy of Pediatrics** issued a landmark **policy statement promoting literacy as “an essential component of pediatric primary care”** for all children. The policy references Reach Out and Read as an effective intervention to engage parents and prepare children to achieve their potential in school and beyond.

This realized a long-term aim of Reach Out and Read to integrate early literacy promotion as a routine practice in health checkups.

Rosa is a 19-year-old single Mom with a 16-month-old son, Calvin. Like all parents, Rosa wants to do what is best for her son but she does not know how. Without help, it is likely that Calvin will start school developmentally behind his peers, and possibly never catch up.

Fortunately, Rosa's pediatrician, Gabriella Muscolo, is a Reach Out and Read doctor. Gabriella has explained to Rosa, and thousands of other new parents at their pediatric checkups, that cuddling and reading aloud to infants and toddlers is one of the best ways of fostering early brain development that leads to lifelong learning and achievement.

At each of 10 checkups from birth until Calvin starts school, Rosa learns how to talk, sing, read to, and connect with Calvin—and Calvin takes home a new book that will prompt them to read together often.

Rosa now says “Reading to my son will make a difference in how he learns and how he does in school. I want to give that to him.” Rosa is giving her son a foundation for success.

Reach Out and Read in my area

Profile

Reach Out and Read gives young children a foundation for success by incorporating books into pediatric care and encouraging families to read aloud together.

Doctors, nurse practitioners, and other medical professionals incorporate Reach Out and Read's evidence-based model into standard pediatric checkups, by advising parents about the importance of reading aloud and giving developmentally-appropriate books to children. The program begins at the newborn checkup and continues through age 5, with a special emphasis on children growing up in low-income communities. Families served by Reach Out and Read read together more often, and their children enter kindergarten with larger vocabularies and stronger language skills, better prepared to achieve their potential.

Reach Out and Read's National Impact

- Reach Out and Read Programs are located in 6,200 hospitals, health centers, and pediatric clinics in all 50 states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands
- Reach Out and Read serves 4.9 million children and families annually
- More than 7.5 million new, developmentally-appropriate books are given to children annually
- More than 33,700 doctors and nurses currently participate in Reach Out and Read
- Community volunteers dedicate more than 400,000 hours of service to Reach Out and Read annually.

Reach Out and Read's Local Impact

- 138 clinical locations
- 87,026 children participate annually
- 151,816 new books distributed annually

Partnering with Families to Promote Kindergarten Readiness

WHAT IS REACH OUT AND READ?

An evidence-based school readiness program where doctors give children new books and inspire families to read together, starting when children are babies. At each well-child checkup from ages 6 months through 5 years, Reach Out and Read doctors use a children's book to help assess child development and parent-child interactions, while modeling for and teaching families how to promote literacy at home. Reach Out and Read is a national program with proven outcomes. When families participate, parents read aloud more often and children have improved language and literacy skills.

A STATEWIDE NETWORK OF MEDICAL PROVIDERS SUPPORTING FAMILIES WITH YOUNG CHILDREN

The healthcare system provides a population-wide platform to improve school readiness and increase equity. Through an evidence-based program and linkage to other resources, Reach Out and Read leverages the power of parents and the influence of children's doctors to nurture children's potential from birth.

- Delivers an Evidence-Based Program with 15 Studies Demonstrating Efficacy
- Supports Children and Families "Where They Are" Through a Trusted Messenger
- Leverages the Healthcare System to Create a Scalable Statewide Network
- Creates Opportunity, Serving Diverse Families in Culturally Relevant Ways
- Facilitates Family Connections to Other Child Development Resources

CURRENT IMPACT

30 counties
229 medical practices
2,000 medical providers
129,000 families
258,000 well-child checkups

"Reading regularly with young children stimulates optimal patterns of brain development and strengthens parent-child relationships at a critical time in child development, which, in turn, builds language, literacy, and social-emotional skills that last a lifetime."

- AMERICAN ACADEMY OF PEDIATRICS

“Reach Out and Read is the cornerstone of all my well-child checkups for children 6 months through 5 years. Giving a book to a child perfectly illustrates the importance of reading and family bonding for the growing mind. Watching the delight in a child's eye as they open their new book is truly rewarding. It is fulfilling to sit down with the family and teach them how pointing at pictures and reading builds knowledge and language skills alike. Countless families have told me that the books we provide are the only ones on their shelves at home. Reach Out and Read is making a tangible impact in my community. ”

- THATCHER FELT, DO, YAKIMA VALLEY FARMWORKERS CLINIC

Children who start kindergarten behind rarely catch up, and disparities in early childhood tend to persist throughout school and life.

WHY START WITH BABIES, PARENTS, AND DOCTORS?

Babies: Brain development is most rapid in the first 3 years of life, when most children are not in formal care. By 9 months of age, skill differences are measurable between children. Research shows that there is up to a 30 million word gap between the number of words children from low-income families vs. higher income families hear by age 3.

Parents: From birth, language-rich “back and forth” interactions between parent and child are critical for optimal development. When parents talk and read with their young children, early language and communication skills develop. When this doesn’t happen, children miss the opportunity to achieve their fullest potential. Having books at home and parents who read aloud have long been demonstrated to be vital precursors to later success in school.

Doctors: Through regular checkups, medical providers become trusted partners with families. They help parents learn how to support their child’s health and development at home. Reach Out and Read doctors use the gift of a children’s book to help assess child development and parent-child interactions, while modeling for and teaching families how to promote literacy at home. Each visit provides an opportunity to strengthen doctor-parent-child relationships, and reinforce the central role that parents play in their child’s early learning.

INCREASING EQUITY, SCALING BROADLY

Intentionally aiming to “level the playing field” as early as possible, Reach Out and Read prioritizes medical clinics serving children living in low-income families or who are otherwise at risk for poor educational outcomes. Of the children currently served, 69% live in low-income families, 48% are children of color, and 27% have a home language other than English. Currently, there are over 2,000 medical providers in 229 programs in 30 counties and 46 legislative districts who collectively serve more than 129,000 young children and their families.

ASSURING QUALITY

Reach Out and Read program specialists encourage and facilitate medical provider participation. We offer Professional Development that enables medical providers to make literacy promotion a standard part of well-child care. We deliver Technical Assistance to assure clinics can deliver services to families with fidelity to the proven model. We continually monitor Reach Out and Read programs, assess quality, and offer quality improvement support as needed.
